

FULL SERVICE . ALL THE WAY

EVERYTHING UNDER CONTROL

7 FREE Petersime Service Card

The Petersime Service Card is a personal card, which is supplied to the hatchery manager who is registered on our technical website www.servicepetersime.com. The card contains the name of the hatchery, the name of the person that registered and his/her chosen login name. That way, should you lose your password, you can easily request it again by simply entering your login name on the website.

With the Service Card you are registered as a user of Petersime equipment, and we can easily identify you, so we can respond to your enquiries even faster.

The Service Card comes free of charge and entitles you to our newsletter with company information, new releases, upcoming events, etc. The Service Card is directly and fully linked to our service website:

- e-Shop: you can easily order spare parts through the e-shop on our service website. Browse for the correct part and order on-line.
- e-News: we regularly inform you about the latest additions and updates on our website.
- Helpdesk: thanks to the registration procedure, you can be easily identified when using our 24/7 helpdesk during operation.
- Performance Optimization Centre: we provide all the means and tools to allow your hatchery to perform optimally.

2 Tailored Documentation

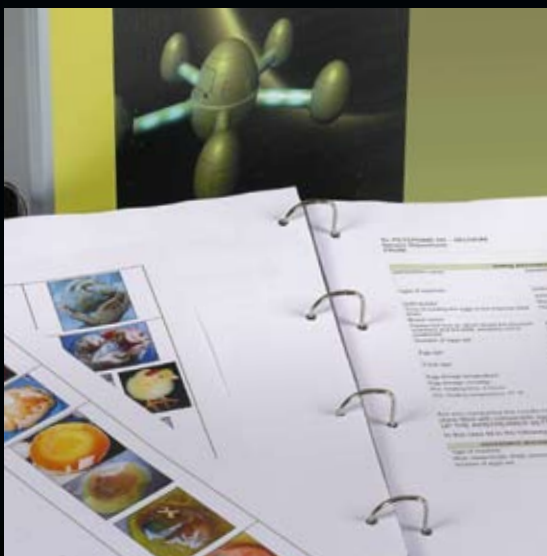

All of our technical documents are available in three formats: paper, Internet and CD-ROM. Our technical documentation totals to some 15,000 pages and includes data covering over 30 years of experience.

The Tailored Documentation box contains specific information on the machines you ordered. Technical specifications on how to run and maintain your machines in the most efficient way, simply explained and neatly arranged in separate sheets.

3 Incubation Guide

The content of the Incubation Guide is tailored to your specific needs, such as species, breed, single- or multi-stage incubation. In nine detailed chapters, all machine-related aspects are covered and the incubation process is evaluated from setting eggs until chick take-off.

We explain the configuration of the controller, incubation programmes, calibration, hatch breakout and much more. Several fill-in forms will motivate the hatchery manager to relay his information to our Service Station, so we can evaluate this input and give you valuable feedback.
